

Pruning & Weeding Services

Due to a high demand from our customers, Parker Homescape is now offering pruning & weeding services. A properly pruned and weeded landscape offers many advantages in addition to maintaining the beauty of your plantings.

PRUNING

- *Removing dead leaves, branches, and flowers maintains the health of your plants and ensures the longevity of your landscape investment.*
- *Regular pruning promotes healthy plant growth.*
- *Pruning stimulates the budding of your flowering plants, and increases the quantity of flowers.*
- *Pruning helps to protect your plantings from storm damage. If a tree is not properly trimmed, the tree and/or its branches may become more susceptible to toppling over or breaking off during a storm. In addition, some species of shrubs may become more susceptible to storm damage if not properly pruned.*
- *Some varieties of shrubs can become unwieldy and difficult to prune over time without annual trimming and shaping.*
- *Different plantings should be pruned at different times of the year. The professionals at Parker Homescape can schedule the optimal time for each species on your property.*

WEEDING

- *Weeds need to be removed because they are unsightly and they compete with your landscape plantings for sunlight, moisture, and nutrients.*
- *Weeding aerates the soil allowing moisture and nutrients to reach the roots of your cultivated plantings.*

Regularly scheduled care keeps your landscape looking great throughout the year.
